
1–2 meV cartridge ($W = 114\,\lambda$)
infinite wires
bars, Gaussian-collected
open, Gaussian-collected
walls, Gaussian-collected
ideal uniform
aperture 0.89
$\beta^2/\beta^2_{\infty,\mathrm{peak}}$
ν/ν_c

field across the aperture
bars
open
walls
$|E_{\mathrm{out}}(y)|^2/|E_\infty|^2$ at peak
y along wires [mm]

0.25–0.5 meV cartridge ($W = 28.5\,\lambda$)
$\beta^2/\beta^2_{\infty,\mathrm{peak}}$
ν/ν_c

field across the aperture
$|E_{\mathrm{out}}(y)|^2/|E_\infty|^2$ at peak
y along wires [mm]
